JOSHUA AYEBALE

Gulu City, Uganda | **+256-784778551** | **ayebalejoshua003@gmail.com** | **LinkedIn:** Ayebale Joshua

PROFESSIONAL SUMMARY

Dedicated Computer Science undergraduate at Gulu University, Linux enthusiast, full-stack developer, and lead technical consultant at J-Core Labs. Experienced in building scalable systems, mobile applications, embedded hardware prototypes, and providing professional IT infrastructure and technical support to academic and commercial clients.

EDUCATION

Bachelor of Computer Science (Undergraduate)

Gulu University, Gulu, Uganda

Relevant Coursework: Data Structures & Algorithms, Graph Theory, Digital Logic Design, Real-Time Systems, and Network Architecture.

TECHNICAL SKILLS & PROFICIENCIES

- **Programming Languages:** Python (80%), JavaScript (85%), C / C++ (60%), Dart & Flutter (45%), HTML5 / CSS3 (85%)
- **Databases & Storage:** SQL & Relational Database Design (80%), SQLite3, Cloud & Encrypted Local Storage
- **Systems & Networking:** Linux (Ubuntu Administration - 65%), Cisco Packet Tracer & Networking Topologies (65%)
- **Tools & Creative Design:** Git, GitHub, VS Code, PyCharm, NumPy, Pandas, Penpot, Alight Motion, Flipaclip (65%)

EXPERIENCE & LEADERSHIP

Founder & Lead Technical Consultant | J-Core Labs (Formerly UrbanByte)

Gulu City, Uganda

- Deploying, customizing, and optimizing Linux (Ubuntu) and Windows workstation environments for campus and commercial clients.
- Executing complex hardware diagnostics, file system troubleshooting, and professional data recovery solutions.
- Managing the actively running J-Core Labs platform for tech support and client service bookings.

Inter-University Developer Community Lead

- Organized inter-university developer sessions and peer mentoring circles to facilitate collaborative coding, technical troubleshooting, and project sharing.
- Leveraged prior educator experience in science and mathematics to mentor incoming tech enthusiasts.

FEATURED PROJECTS

- Wearable Blood Pressure Monitor (In Progress) — Embedded system prototype integrating biomedical sensors with microcontroller logic for continuous, portable health tracking.
- J-Core Labs Active Platform (Deployed) — Active web production platform built to streamline campus tech support, data recovery, and IT engineering service requests.
- Emergency Book Mobile App (Deployed) — Cross-platform mobile contact application engineered using Python, Kivy framework, and embedded SQLite3 storage for fast offline emergency retrieval.
- Accommodation Portal (Deployed) — Responsive web platform built with HTML5, CSS3, and JavaScript to aggregate and display student hostel listings.
- Village Saving System (Deployed) — Python and Kivy application automating rural financial calculations with encrypted local data storage and secure cloud synchronization.
